

01dB launches FUSION, its new sound-level meter/analyzer

FUSION: Innovative, simple and, above all, extremely effective!

On 25 November **01dB** officially presented **FUSION**, its new **Smart Sound & Vibration Analyzer**. FUSION is a powerhouse of technologies that adapts perfectly to any measurement situation, with three key advantages:

Wireless vibration: Deploying cables reduces operational efficiency, so **FUSION** eliminates the need! For the first time on a sound-level meter, three-axis vibration measurement is available via a wireless sensor, simultaneously with acoustic measurement.

High-performance multi-tasking: FUSION measures both noise and vibrations perfectly. Its powerful features make it straightforward to change from one type of measurement to the other.

Hyper-communicating: FUSION is the first sound-level meter that allows you to take control remotely and manage measurement campaigns via the on-board WiFi, 3G modem and Ethernet connections.

The **FUSION** Smart Sound & Vibration Analyzer is the most innovative sound-level meter on the market and, above all, an exceptional productivity tool.
